

**Visvesvaraya Technological University, Belagavi**

**B.E (CBCS) Open Electives Lists**

**Updated on 06-02-2018**

**(As per approval of Vice Chancellor's, dated:01.02.18)**

**Note to Students:**

- 1) All B.E (CBCS) students (except B.Arch, B.Tech) should study one Open elective each in the 5<sup>th</sup> and 6<sup>th</sup> Semester as a part of their Programme.
- 2) Students should registers for the Open elective in the beginning of the 5<sup>th</sup>/6<sup>th</sup> semester in the department, where the elective is offered. An Open elective is not offered in a department if the registered student's strength is less than 10.
- 3) All Open electives are offered to students of all B.E Programmes (branches) of engineering in general (except B.Arch). However, if a student of a particular Programme has already studied/going to study, in higher semester a similar Core course with majority of topics same as that of a particular Open elective, then that Open elective is not offered to that student. In which case, the student has to select an alternative Open elective.
- 4) Having studied/selected a particular Open Elective, a student is not eligible to take a Professional elective of his/her Programme in the Higher semesters/same semester which will have majority of topics same as that of the Open elective studied/selected. In which case, the student has to select an alternative Professional elective.
- 5) Students are advised to select an Open elective of their interest and if they have a pre-requisite knowledge to study that particular Open elective.

**Note to Departments:**

- 1) Above conditions are to be monitored by an Open elective coordinator of the department to which the student belongs to and the Course coordinator of the department where the student registers for the Open elective in the beginning of the 5<sup>th</sup>/6<sup>th</sup> semester.
- 2) The Teaching department(s) for Open Elective is not restricted to only those departments(s) indicated in the list. Any other department faculty who has requisite expertise to teach a particular Open elective can teach it.
- 3) Offering department indicated in the list of Open electives is the department/board which is responsible to set the Syllabus and Question paper for the particular Open elective.

## CATEGORIZATION FOR THE THINKING PROCESS

### Bloom's Taxonomy (Revised)

| <b>Bloom's Revised Taxonomy</b><br><b>Levels, Level Definitions and attributes levels</b><br><b>along with action verbs that can be used when developing learning outcomes.</b>   |   |   |  |
|---|---|---|--|
|   | <b>Level</b>                              | <b>Level Definitions and attributes</b>   | <b>Verbs(not comprehensive )</b>   |
| <b>Lower order thinking skills (LOTS)</b>   | Remembering<br>(Knowledge)<br>$L_1$       | Students exhibit memory/rote memorization of previously learnt materials by recognition, recalling facts, terms, basic concepts, and simple answers.<br>Able to remember, but not necessarily fully understanding the material.   | Copy, Choose, Define, Discover, Describe, Duplicate, Enumerate, Find, How, Identify, Label, List, Locate, Listen, Memorize, Match, Name, Omit, Quote, Recall, Relate, Reproduce, Recognize, Select, Show, Spell, Tell, Tabulate, Who, When, Where etc.   |
|   | Understanding<br>(Comprehension)<br>$L_2$ | Students demonstrate understanding of facts and ideas by interpreting, exemplifying, classifying, inferring, summarizing, comparing and explaining main ideas with own words.   | Ask, Classify, Compare, Contrast, Demonstrate, Describe, Extend, Differentiate, Distinguish, Discuss, Express, Explain, Group, Illustrate, Infer, Interpret, Outline, Paraphrase, Rephrase, Relate, Show, Summarize, Select, Translate, Restate etc.   |
|   | Applying<br>(Application)<br>$L_3$        | Students solve problems in new situations by applying acquired knowledge, facts, techniques and rules in a different way.   | Calculate, Predict, Apply, Solve, Illustrate, Use, Demonstrate, Determine, Model, Build, Construct, Develop, Experiment With, Identify, Make Use Of, Organize, Plan, Select etc.   |
| <b>Higher order thinking skills (HOTS)</b>  | Analysing<br>(Analysis)<br>$L_4$          | Students are able to examine and break information into component parts by identifying motives, causes arrangement, logic and semantics. They can make inferences and find evidence to support generalization.  | Analyse, Assume, Break Down, Classify, Categorize, Conclusion, Compare, Contrast, Diagram, Discover, Dissect, Distinguish, Divide, Examine, Function, Illustrate, Inference, Inspect, List, Motive, Outline, Relationships, Simplify, Survey, Take Part In, Test For etc.  |
|   | Evaluating<br>(Evaluation)<br>$L_5$       | Students are able to present and defend opinions by making judgments about information, validity of ideas, or quality of work based on a set of criteria. They can justify a decision or course of action.  | Agree, Appraise, Assess, Award, Build, Create, Compose, Choose, Compare, Conclude, Criteria, Criticize, Design, Derive, Develop, Decide, Deduct, Determine, Disprove, Defend, Estimate, Formulate, Generate, Invent, Modify, Evaluate, Explain, Influence, Judge, Interpret, Justify, Mark, Measure, Perceive, Rate, Prioritize, Recommend, Rule On, Select, Support, Value etc.             |
|   | Creating<br>(Synthesis)<br>$L_6$          | Students are able to compile, generate or view information, ideas or products together in a different way by combining elements in a new pattern or by proposing alternative solutions. Also, use information to form a unique product. This requires creativity and originality. | Assemble, Adapt, Anticipate, Build, Change, Choose, Combine, Collaborate, Collect, Create, Compile, Compose, Construct, Delete, Design, Develop, Discuss, Develop, Devise, Elaborate, Estimate, Formulate, Happen, Hypothesize, Imagine, Improve, Invent, Imagine, Intervene, Make Up, Maximize, Modify, Originate, Plan, Predict, Propose, Rearrange, Solve, Suppose, Substitute, Test etc. |
| <b>Graduate attributes:</b> Graduate attributes are the qualities, skills and understandings a university community agrees its students should develop during their time with the institution. These attributes include but go beyond the disciplinary expertise or technical knowledge that has traditionally formed the core of most university courses. They are qualities that also prepare graduates as agents of social good in an unknown future.<br><br>Bowden, Hart, King, Trigwell & Watts (2000) |   |   |  |

\*\*\* Students can select any one of the open electives offered by any Department (Please refer to consolidated list of VTU for open electives). Selection of an open elective is not allowed provided;

- The candidate has pre – requisite knowledge.
- The candidate has not studied during I and II year of the programme.
- The syllabus content of open elective is similar to that of Departmental core courses or professional electives.
- A similar course, under any category, is prescribed in the higher semesters.

Registration to electives shall be documented under the guidance of Programme Coordinator and Adviser.

**1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.

**2. Professional Elective:** Electives relevant to chosen specialization/ branch.

**3. Open Elective:** Electives from other technical and/ or emerging subject areas.

- 1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.
- 2. Professional Elective:** Elective relevant to chosen specialization/ branch.
- 3. Project Phase –I + Seminar:** Literature Survey, Problem Identification, objectives and Methodology. Submission of synopsis and seminar.
- 4. Internship / Professional Practice:** To be carried between the VI and VII semester vacation or VII and VIII semester vacation period.

| 15EE834                    | Power System in Emergencies                         |

**1. Core subject:** This is the course, which is to be compulsorily studied by a student as a core requirement to complete the requirement of a programme in a said discipline of study.

**2. Professional Elective:** Elective relevant to chosen specialization/ branch.

**3. Internship / Professional Practice:** To be carried between the VI and VII semester vacation or VII and VIII semester vacation period.

### III SEMESTER DETAILED SYLLABUS

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - III  |   |            |                       |
|---|---|------------|-----------------------|
| ENGINEERING MATHEMATICS –III (Core Course)  |   |            |                       |
| Subject Code  | 15MAT31   | IA Marks   | 20                    |
| Number of Lecture Hours/Week  | 04  | Exam Hours | 03                    |
| Total Number of Lecture Hours   | 50  | Exam Marks | 80                    |
| Credits - 04  |   |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>The objectives of this course is to introduce students to the mostly used analytical and numerical methods in the different engineering fields by making them to learn Fourier series, Fourier transforms and Z-transforms, statistical methods , numerical methods to solve algebraic and transcendental equations, vector integration and calculus of variations. ■</li></ul>   |   |            |                       |
| <b>Module-1</b>   |   |            | <b>Teaching Hours</b> |
| <b>Fourier Series:</b> Periodic functions, Dirichlet’s condition, Fourier Series of periodic functions with period $2\pi$ and with arbitrary period $2c$ . Fourier series of even and odd functions. Half range Fourier Series, practical harmonic analysis-Illustrative examples from engineering field. ■   |   |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing.                             |            |                       |
| <b>Module-2</b>   |   |            |                       |
| <b>Fourier Transforms:</b> Infinite Fourier transforms, Fourier sine and cosine transforms. Inverse Fourier transform.<br><b>Z-transform:</b> Difference equations, basic definition, z-transform-definition, Standard z-transforms, Damping rule, Shifting rule, Initial value and final value theorems (without proof) and problems, Inverse z-transform. Applications of z-transforms to solve difference equations. ■   |   |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.                                |            |                       |
| <b>Module-3</b>   |   |            |                       |
| <b>Statistical Methods:</b> Review of measures of central tendency and dispersion. Correlation-Karl Pearson’s coefficient of correlation-problems. Regression analysis- lines of regression (without proof) –problems Curve Fitting: Curve fitting by the method of least squares- fitting of the curves of the form, $y = ax + b$ , $y = ax^2 + bx + c$ and $y = ae^{bx}$ .<br>Numerical Methods: Numerical solution of algebraic and transcendental equations by Regula-Falsi Method and Newton-Raphson method. ■ |   |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>3</sub> – Applying.  |            |                       |
| <b>Module-4</b>   |   |            |                       |
| <b>Finite differences:</b> Forward and backward differences, Newton’s forward and backward interpolation formulae. Divided differences- Newton’s divided difference formula. Lagrange’s interpolation formula and inverse interpolation formula (all formulae without proof)-Problems.<br><b>Numerical integration:</b> Simpson’s (1/3) <sup>th</sup> and (3/8) <sup>th</sup> rules, Weddle’s rule (without proof) – Problems. ■  |   |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>3</sub> – Applying.  |            |                       |
| <b>Module-5</b>   |   |            |                       |
| <b>Vector integration:</b> Line integrals-definition and problems, surface and volume integrals-definition, Green’s theorem in a plane, Stokes and Gauss-divergence theorem(without proof) and problems.<br><b>Calculus of Variations:</b> Variation of function and Functional, variational problems. Euler’s equation, Geodesics, hanging chain, problems. ■  |   |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.<br>L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |            |                       |

| <b>B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)</b><br><b>CHOICE BASED CREDIT SYSTEM (CBCS)</b><br><b>SEMESTER - III</b>   |  |                            |                   |                                |
|---|--|----------------------------|-------------------|--------------------------------|
| <b>15MAT31 ENGINEERING MATHEMATICS –III (Core Subject) (continued)</b>  |  |                            |                   |                                |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"> <li>• Know the use of periodic signals and Fourier series to analyze circuits and system communications.</li> <li>• Explain the general linear system theory for continuous-time signals and digital signal processing using the Fourier Transform and z-transform.</li> <li>• Employ appropriate numerical methods to solve algebraic and transcendental equations.</li> <li>• Apply Green's Theorem, Divergence Theorem and Stokes' theorem in various applications in the field of electro-magnetic and gravitational fields and fluid flow problems.</li> <li>• Determine the extremals of functional and solve the simple problems of the calculus of variations. ■</li> </ul> |  |                            |                   |                                |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Life-Long Learning, Accomplishment of Complex Problems.   |  |                            |                   |                                |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.</li> <li>• There will be two full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub question covering all the topics under a module.</li> <li>• The students will have to answer five full questions, selecting one full question from each module.</li> </ul>  |  |                            |                   |                                |

| Credits - 04   |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To familiarize the basic laws, source transformations, theorems and the methods of analysing electrical circuits.</li><li>To explain the concept of coupling in electric circuits and resonance.</li><li>To familiarize the analysis of three-phase circuits, two port networks and networks with non-sinusoidal inputs.</li><li>To analyze the transient response of circuits with dc and sinusoidal ac input.</li><li>To impart basic knowledge on network analysis using Laplace transforms. ■</li></ul>  |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Basic Concepts:</b> Active and passive elements, Concept of ideal and practical sources. Source transformation and Source shifting, Concept of Super Mesh and Super node analysis. Analysis of networks by (i) Network reduction method including star – delta transformation, (ii) Mesh and Node voltage methods for ac and dc circuits with independent and dependent sources. Equilibrium equations using KCL and KVL, Duality.<br><b>Resonant Circuits:</b> Analysis of simple series RLC and parallel RLC circuits under resonances. Resonant frequency, Bandwidth and Quality factor at resonance. Practical RL-RC circuits.■ |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Network Theorems:</b> Analysis of networks, with and without dependent ac and dc sources by Thevenin's and Norton's theorems. Analysis of ac and dc circuits for maximum power transfer to resistive and complex loads. Application of Millman's theorem and Super Position theorem to multisource networks. Reciprocity theorem and its application. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Transient Analysis:</b> Review of ordinary linear non homogeneous first and second order differential equations with constant coefficients. Transient analysis of ac and dc circuits by classical method. Transient analysis of dc and ac circuits. Behaviour of circuit elements under switching action ( $t = 0$ and $t = \infty$ ). Evaluation of initial conditions. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating.  |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Laplace Transformation:</b> Laplace transformation (LT), LT of Impulse, Step, Ramp, Sinusoidal signals and shifted functions. Waveform synthesis. Initial and Final value theorems. Laplace Transform of network and time domain solution for RL, RC and RLC networks for ac and dc excitations. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-5</b>  |  |            |                       |
| <b>Unbalanced Three phase systems:</b> Analysis of three phase systems, calculation of real and reactive powers.<br><b>Two Port networks:</b> Definition, Open circuit impedance, Short circuit admittance and Transmission parameters and their evaluation for simple circuits. Network functions of one port and two port  |  |            | <b>10</b>             |

| Subject Code   | 15EE33   | IA Marks   | 20                    |
| Number of Lecture Hours/Week   | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 50   | Exam Marks | 80                    |
| Credits - 04   |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>• To understand the concepts of transformers and their analysis.</li><li>• To suggest a suitable three phase transformer connection for a particular operation.</li><li>• To understand the concepts of generator and to evaluate their performance.</li><li>• To explain the requirement for the parallel operation of transformers and synchronous generators.■</li></ul>  |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Single phase Transformers:</b> Review of Principle of operation, constructional details of shell type and core type single-phase transformers, EMF equation, losses and commercial efficiency, conditions for maximum efficiency (No question shall be set from the review portion). Salient features of ideal transformer, operation of practical transformer under no - load and on - load with phasor diagrams. Equivalent circuit, Open circuit and Short circuit tests, calculation of equivalent circuit parameters and predetermination of efficiency- commercial and all-day. Voltage regulation and its significance.<br><b>Three-phase Transformers:</b> Introduction, Constructional features of three-phase transformers. Choice between single unit three-phase transformer and a bank of three single-phase transformers. Transformer connection for three phase operation – star/star, delta/delta, star/delta, zigzag/star and V/V, choice of connection. Phase conversion - Scott connection for three-phase to two-phase conversion. Labelling of three-phase transformer terminals, vector groups. Equivalent circuit of three phase transformers. ■ |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Parallel Operation of Transformers:</b> Necessity of Parallel operation, conditions for parallel operation – Single phase and three phase. Load sharing in case of similar and dissimilar transformers.<br><b>Autotransformers and Tap changing transformers:</b> Introduction to auto transformer - copper economy, equivalent circuit, three phase auto connection and voltage regulation. Voltage regulation by tap changing – off circuit and on load.<br><b>Tertiary winding Transformers:</b> Necessity of tertiary winding, equivalent circuit and voltage regulation, tertiary winding in star/star transformers, rating of tertiary winding. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.                               |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Transformers (continuation):</b> Cause and effects of harmonics, Current inrush in transformers, noise in transformers. Objects of testing transformers, polarity test, Sumpner's test.<br><b>Direct current Generator</b> – Review of construction, types, armature windings, relation between no load and terminal voltage (No question shall be set from the review portion). Armature reaction, Commutation and associated problems, no load and full load characteristics. Reasons for reduced dependency on dc generators.<br><b>Synchronous generators-</b> Review of construction and operation of salient & non-salient pole synchronous generators (No question shall be set from the review portion). Armature windings, winding factors, emf equation. Harmonics – causes, reduction and elimination. Armature reaction, Synchronous reactance, Equivalent circuit. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating.  |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Synchronous generators (continuation):</b> Generator load characteristic. Voltage regulation, excitation control for constant terminal voltage. Generator input and output. Parallel operation of   |  |            | <b>10</b>             |
|  |  |            |                       |

| Credits - 04  |  |            |                |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To impart the knowledge of combinational circuit design.</li><li>To impart the knowledge of Sequential circuit design.</li><li>To provide the basic knowledge about VHDL &amp; its use.■</li></ul>  |  |            |                |
| Module-1  |  |            | Teaching Hours |
| Principles of combinational logic: Definition of combinational, canonical forms, Generation of switching equations from truth tables, Karnaugh maps-3, 4 and 5 variables. Incompletely specified functions (Don't care terms). Simplifying max - term equations. Quine -McClusky minimization technique, Quine - McClusky using don't care terms, Reduced Prime Implicant tables, Map entered variables. ■  |  |            | 10             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                |
| Module-2  |  |            |                |
| <b>Analysis and design of Combinational Logic:</b> General approach, Decoders-BCD decoders, Encoders. Digital multiplexers-using multiplexers as Boolean function generators. Adders and Subtractors-Cascading full adders, Look ahead carry, Binary comparators. Design methods of building blocks of combinational logics.■   |  |            | 10             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                |
| Module-3  |  |            |                |
| <b>Sequential Circuits:</b> Basic Bistable element, Latches, SR latch, application of SR latch, A Switch debouncer, The SR latch, The gated SR latch. The gated D Latch, The Master-Slave Flip-Flops (Pulse-Triggered Flip-Flops): The master-slave SR Flip-Flops, The master-slave JK Flip-Flop, Edge Triggered Flip-flop: The Positive Edge-Triggered D Flip-Flop, Negative-Edge Triggered D Flip-Flop. Characteristic equations, Registers, Counters-Binary Ripple Counter, Synchronous Binary counters, Counters based on Shift Registers, Design of a Synchronous counters, Design of a Synchronous Mod-6 counters using clocked JK Flip-Flops Design of a Synchronous Mod-6 counter using clocked D, T, or SR Flip-Flops. ■ |  |            | 10             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                |
| Module-4  |  |            |                |
| <b>Sequential Design:</b> Introduction, Mealy and Moore models, State machine notation, synchronous sequential circuit analysis and design. Construction of state Diagrams, Counters Design. ■  |  |            | 10             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                |
| Module-5  |  |            |                |
| <b>HDL:</b> Introduction, A brief history of HDL, Structure of HDL Module, Operators, Data types, Types of Descriptions, Simulation and synthesis, Brief comparison of VHDL and Verilog.<br><b>Data-Flow Descriptions:</b> Highlights of Data flow descriptions, Structure of data-flow description, Data type-vectors. ■   |  |            | 10             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                |

| <b>B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)</b><br><b>CHOICE BASED CREDIT SYSTEM (CBCS)</b><br><b>SEMESTER - III</b>  |   |  |                  |                               |
|--|---|--|------------------|-------------------------------|
| <b>15EE35 DIGITAL SYSTEM DESIGN (Core Course) (continued)</b>  |   |  |                  |                               |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"> <li>• Design and analyze combinational &amp; sequential circuits</li> <li>• Design circuits like adder, sub tractor, code converter etc.</li> <li>• Understand counters and sequence generators.</li> </ul>  |   |  |                  |                               |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.   |   |  |                  |                               |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten questions.</li> <li>• Each full question is for 16 marks.</li> <li>• There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.</li> <li>• Each full question with sub questions will cover the contents under a module.</li> <li>• Students will have to answer 5 full questions, selecting one full question from each module. ■</li> </ul> |   |  |                  |                               |

| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To understand the concept of units and dimensions.</li><li>To measure resistance, inductance, capacitance by use of different bridges.</li><li>To study the construction and working of various meters used for measurement.</li><li>To have the working knowledge of electronic instruments and display devices. ■</li></ul>  |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Units and Dimensions:</b> Review of fundamental and derived units. SI units (No question shall be set from the review portion). Dimensional equations, problems.<br><b>Measurement of Resistance:</b> Wheatstone's bridge, sensitivity, limitations. Kelvin's double bridge. Earth resistance measurement by fall of potential method and by using Megger.<br><b>Measurement of Inductance and Capacitance:</b> Sources and detectors, Maxwell's inductance bridge, Maxwell's inductance and capacitance bridge, Hay's bridge, Anderson's bridge, Desauty's bridge, Schering bridge. Shielding of bridges. Problems. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Measurement of Power, Energy, Power factor and Frequency:</b> Review ofDynamometer wattmeter construction and operation (No question shall be set from the review portions), Torque expression, Errors and minimization, UPF and LPF wattmeters. Measurement of real and reactive power in 3 phase circuits. Review of Induction type energy meter construction and operation (No question shall be set from the review portions)]. Errors, adjustments and calibration of single and three phase energy meters, Problems. Construction and operation of single-phase and three phase dynamometer type power factor meter. Weston frequency meter and phase sequence indicator. ■ |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Extension of Instrument Ranges:</b> Desirable features of ammeters and voltmeters.Shunts and multipliers. Construction and theory of instrument transformers, Desirable characterises, Errors of CT and PT. Turns compensation, Illustrative examples, Silsbee's method of testing CT.<br><b>Magnetic measurements:</b> Introduction, measurement of flux/ flux density, magnetising force and leakage factor. Hopkinson permeameter. Measurement of iron loss by wattmeter method. A brief discussion on measurement of air gap flux and field strength.■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Electronic and digital Instruments:</b> Introduction. Essentials of electronic instruments, Advantages of electronic instruments. True rms reading voltmeter. Electronic multimeters. Digital voltmeters (DVM) - Ramp type DVM, Integrating type DVM, Continuous – balance DVM and Successive - approximation DVM. Q meter. Principle of working of electronic energy meter (block diagram treatment), extra features offered by present day meters and their significance in billing.■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.  |            |                       |

| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To design and test half wave and full wave rectifier circuits.</li><li>To design and test different amplifier and oscillator circuits using BJT.</li><li>To study the simplification of Boolean expressions using logic gates.</li><li>To realize different Adders and Subtractors circuits.</li><li>To design and test counters and sequence generators. ■</li></ul>  |   |            |    |
| Sl. No   | Experiments   |            |    |
| 1  | Design and Testing of Full wave – centre tapped transformer type and Bridge type rectifier circuits with and without Capacitor filter. Determination of ripple factor, regulation and efficiency. |            |    |
| 2  | Static Transistor characteristics for CE, CB and CC modes and determination of h parameters.  |            |    |
| 3  | Frequency response of single stage BJT and FET RC coupled amplifier and determination of half power points, bandwidth, input and output impedances.   |            |    |
| 4  | Design and testing of BJT - RC phase shift oscillator for given frequency of oscillation.   |            |    |
| 5  | Determination of gain, input and output impedance of BJT Darlington emitter follower with and without bootstrapping.  |            |    |
| 6  | Simplification, realization of Boolean expressions using logic gates/Universal gates.   |            |    |
| 7  | Realization of half/Full adder and Half/Full Subtractors using logic gates.   |            |    |
| 8  | Realization of parallel adder/Subtractors using 7483 chip- BCD to Excess-3 code conversion and Vice - Versa.  |            |    |
| 9  | Realization of Binary to Gray code conversion and vice versa.   |            |    |
| 10   | Design and testing Ring counter/Johnson counter.  |            |    |
| 11   | Design and testing of Sequence generator.   |            |    |
| 12   | Realization of 3 bit counters as a sequential circuit and MOD – N counter design using 7476, 7490, 74192, 74193.  |            |    |
| Revised Bloom's Taxonomy Level   | L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating, L <sub>6</sub> – Creating   |            |    |
| <b>Course outcomes:</b> <p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"><li>Design and test different diode circuits.</li><li>Design and test amplifier and oscillator circuits and analyse their performance.</li><li>Use universal gates and ICs for code conversion and arithmetic operations.</li><li>Design and verify on of different counters.</li></ul>   |   |            |    |
| <b>Graduate Attributes (As per NBA)</b> <p>Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.</p>   |   |            |    |
| <b>Conduct of Practical Examination:</b> <ol style="list-style-type: none"><li>All laboratory experiments are to be included for practical examination.</li><li>Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.</li><li>Students can pick one experiment from the questions lot prepared by the examiners.</li><li>Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■</li></ol> |   |            |    |

## IV SEMESTER DETAILED SYLLABUS

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - IV   |  |            |                       |
|---|--|------------|-----------------------|
| ENGINEERING MATHEMATICS –IV (Core Subject)  |  |            |                       |
| Subject Code  | 15MAT41  | IA Marks   | 20                    |
| Number of Lecture Hours/Week  | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours   | 50   | Exam Marks | 80                    |
| Credits - 04  |  |            |                       |
| <b>Course Objectives:</b><br>The purpose of this course is to make students well conversant with numerical methods to solve ordinary differential equations, complex analysis, sampling theory and joint probability distribution and stochastic processes arising in science and engineering. ■  |  |            |                       |
| <b>Module-1</b>   |  |            | <b>Teaching Hours</b> |
| <b>Numerical Methods:</b> Numerical solution of ordinary differential equations of first order and first degree, Taylor’s series method, modified Euler’s method, Runge - Kutta method of fourth order. Milne’s and Adams-Bashforth predictor and corrector methods (No derivations of formulae). ■   |  |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                           |            |                       |
| <b>Module-2</b>   |  |            |                       |
| <b>Numerical Methods:</b> Numerical solution of second order ordinary differential equations, Runge-Kutta method and Milne’s method.<br><b>Special Functions:</b> Series solution-Frobenious method. Series solution of Bessel’s differential equation leading to J <sub>n</sub> (x)-Bessel’s function of first kind. Basic properties, recurrence relations and orthogonality. Series solution of Legendre’s differential equation leading to P <sub>n</sub> (x)-Legendre polynomials. Rodrigue’s formula, problems. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                           |            |                       |
| <b>Module-3</b>   |  |            |                       |
| <b>Complex Variables:</b> Review of a function of a complex variable, limits, continuity, differentiability. Analytic functions-Cauchy-Riemann equations in cartesian and polar forms. Properties and construction of analytic functions. Complex line integrals-Cauchy’s theorem and Cauchy’s integral formula, Residue, poles, Cauchy’s Residue theorem ( without proof) and problems.<br><b>Transformations:</b> Conformal transformations, discussion of transformations:<br>$w = z^2, w = e^z, w = z + (1/z)(z \neq 0)$ and bilinear transformations-problems. ■ |  |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>2</sub> – Understanding, L <sub>3</sub> – ApplyingL <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>   |  |            |                       |
| <b>Probability Distributions:</b> Random variables (discrete and continuous),probability mass/density functions. Binomial distribution, Poisson distribution.Exponential and normal distributions, problems.<br><b>Joint probability distribution:</b> Joint Probability distribution for two discrete random variables, expectation, covariance, correlation coefficient. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>3</sub> – Applying.   |            |                       |
| <b>Module-5</b>   |  |            |                       |
| <b>Sampling Theory:</b> Sampling, Sampling distributions, standard error, test of hypothesis for means and proportions, confidence limits for means, student’s t-distribution, Chi-square distribution as a test of goodness of fit.<br><b>Stochastic process:</b> Stochastic processes, probability vector, stochastic matrices, fixed points, regular stochastic matrices, Markov chains, higher transition probability-simple problems. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>3</sub> – ApplyingL <sub>4</sub> – Analysing.                                 |            |                       |

| <b>B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE)</b><br><b>CHOICE BASED CREDIT SYSTEM (CBCS)</b><br><b>SEMESTER - IV</b>  |  |                                 |                    |                                |
|--|--|---------------------------------|--------------------|--------------------------------|
| <b>15MAT41 ENGINEERING MATHEMATICS – IV (Core Subject) (continued)</b>   |  |                                 |                    |                                |
| <b>Course outcomes:</b> <ul style="list-style-type: none"> <li>• Use appropriate single step and multi-step numerical methods to solve first and second order ordinary differential equations arising in flow data design problems.</li> <li>• Explain the idea of analyticity, potential fields residues and poles of complex potentials in field theory and electromagnetic theory.</li> <li>• Employ Bessel's functions and Legendre's polynomials for tackling problems arising in continuum mechanics, hydrodynamics and heat conduction.</li> <li>• Describe random variables and probability distributions using rigorous statistical methods to analyze problems associated with optimization of digital circuits, information, coding theory and stability analysis of systems.</li> <li>• Apply the knowledge of joint probability distributions and Markov chains in attempting engineering problems for feasible random events. ■</li> </ul> |  |                                 |                    |                                |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Life-Long Learning, Accomplishment of Complex Problems.  |  |                                 |                    |                                |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"> <li>• The question paper will have ten full questions carrying equal marks.</li> <li>• Each full question consisting of 16 marks.</li> <li>• There will be two full questions (with a maximum of four sub questions) from each module.</li> <li>• Each full question will have sub question covering all the topics under a module.</li> <li>• The students will have to answer five full questions, selecting one full question from each module. ■</li> </ul>  |  |                                 |                    |                                |

| CHOICE BASED CREDIT SYSTEM (CBCS)  |   |            |                |
| SEMESTER - IV  |   |            |                |
| POWER GENERATION AND ECONOMICS(Core Subject)   |   |            |                |
| Subject Code   | 15EE42  | IA Marks   | 20             |
| Number of Lecture Hours/Week   | 04  | Exam Hours | 03             |
| Total Number of Lecture Hours  | 50  | Exam Marks | 80             |
| Credits - 04   |   |            |                |
| Course objectives:   |   |            |                |
| <ul style="list-style-type: none"><li>• Explain the arrangement and operation of hydroelectric, steam, diesel, gas turbine and nuclear power plants and working of major equipment in the plants.</li><li>• Classification of substation and explain the operation of different substation equipment.</li><li>• Explain the importance of grounding and different grounding methods used in practice.</li><li>• Explain the economics of power generation and importance of power factor.</li></ul>  |   |            |                |
| Module-1   |   |            | Teaching Hours |
| Hydroelectric Power Plants: Hydrology, run off and stream flow, hydrograph, flow duration curve, Mass curve, reservoir capacity, dam storage. Hydrological cycle, merits and demerits of hydroelectric power plants, Selection of site. General arrangement of hydel plant, elements of the plant, Classification of the plants based on water flow regulation, water head and type of load the plant has to supply. Water turbines – Pelton wheel, Francis, Kaplan and propeller turbines. Characteristic of water turbines Governing of turbines, selection of water turbines. Underground, small hydro and pumped storage plants. Choice of size and number of units, plant layout and auxiliaries. ■   |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                |
| Module-2   |   |            |                |
| Steam Power Plants: Introduction, Efficiency of steam plants, Merits and demerits of plants, selection of site. Working of steam plant, Power plant equipment and layout, Steam turbines, Fuels and fuel handling, Fuel combustion and combustion equipment, Coal burners, Fluidized bed combustion, Combustion control, Ash handling, Dust collection, Draught systems, Feed water, Steam power plant controls, plant auxiliaries.<br>Diesel Power Plant: Introduction, Merits and demerits, selection site, elements of diesel power plant, applications.<br>Gas Turbine Power Plant: Introduction, Merits and demerits, selection site, Fuels for gas turbines, Elements of simple gas turbine power plant, Methods of improving thermal efficiency of a simple steam power plant, Closed cycle gas turbine power plants. Comparison of gas power plant with steam and diesel power plants. ■ |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                |
| Module-3   |   |            |                |
| Nuclear Power Plants: Introduction, Economics of nuclear plants, Merits and demerits, selection of site, Nuclear reaction, Nuclear fission process, Nuclear chain reaction, Nuclear energy, Nuclear fuels, Nuclear plant and layout, Nuclear reactor and its control, Classification of reactors, power reactors in use, Effects of nuclear plants, Disposal of nuclear waste and effluent, shielding. ■   |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                |
| Module-4   |   |            |                |
| Substations: Introduction to Substation equipment; Transformers, High Voltage Fuses, High Voltage Circuit Breakers and Protective Relaying, High Voltage Disconnect Switches, Lightning Arresters, High Voltage Insulators and Conductors, Voltage Regulators, Storage Batteries, Reactors, Capacitors, Measuring Instruments, and power line carrier communication equipment. Classification of substations – indoor and outdoor, Selection of site for substation, Busbar arrangement schemes and single line diagrams of substations.   |   |            | 10             |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - IV  |  |                      |             |                               |
|---|--|----------------------|-------------|-------------------------------|
| 15EE42 POWER GENERATION AND ECONOMICS(Core Subject) (continued)   |  |                      |             |                               |
| Module-4 (continued)  |  |                      |             | Teaching Hours                |
| <b>Substations (continued):</b> Interconnection of power stations. Introduction to gas insulated substation, Advantages and economics of Gas insulated substation.<br><b>Grounding:</b> Introduction, Difference between grounded and ungrounded system. System grounding – ungrounded, solid grounding, resistance grounding, reactance grounding, resonant grounding. Earthing transformer. Neutral grounding and neutral grounding transformer. ■  |  |                      |             |                               |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.  |                      |             |                               |
| Module-5  |  |                      |             |                               |
| <b>Economics:</b> Introduction, Effect of variable load on power system, classification of costs, Cost analysis. Interest and Depreciation, Methods of determination of depreciation, Economics of Power generation, different terms considered for power plants and their significance, load sharing. Choice of size and number of generating plants. Tariffs, objective, factors affecting the tariff, types. Types of consumers and their tariff. Power factor, disadvantages, causes, methods of improving power factor, Advantages of improved power factor, economics of power factor improvement and comparison of methods of improving the power factor. Choice of equipment. ■ |  |                      |             | 10                            |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |                      |             |                               |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"><li>• Describe the working of hydroelectric, steam, nuclear power plants and state functions of major equipment of the power plants.</li><li>• Classify various substations and explain the importance of grounding.</li><li>• Understand the economic aspects of power system operation and its effects.</li><li>• Explain the importance of power factor improvement.</li></ul>  |  |                      |             |                               |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem analysis, Engineers and Society, Environment and Sustainability.  |  |                      |             |                               |

| Number of Lecture Hours/Week   | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 50   | Exam Marks | 80                    |
| Credits - 04   |  |            |                       |
| <b>Course Objectives:</b>  |  |            |                       |
| <ul style="list-style-type: none"><li>• To understand the concepts of various methods of generation of power.</li><li>• To understand the importance of HVAC, EHVAC, UHVAC and HVDC transmission.</li><li>• To design insulators for a given voltage level.</li><li>• To calculate the parameters of the transmission line for different configurations and assess the performance of the line.</li><li>• To study underground cables for power transmission and evaluate different types of distribution systems.</li></ul>   |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Introduction to power system:</b> Structure of electric power system: generation, transmission and distribution. Advantages of higher voltage transmission: HVAC, EHVAC, UHVAC and HVDC. Interconnection. Feeders, distributors and service mains.  |  |            | <b>10</b>             |
| <b>Overhead transmission lines:</b> A brief introduction to types of supporting structures and line conductors-Conventional conductors; Aluminium Conductor steel reinforced (ACSR), All – aluminium alloy conductor (AAAC) and All –aluminium conductor (AAC). High temperature conductors; Thermal resistant aluminium alloy (ATI),Super thermal resistant aluminium alloy (ZTAI), Gap type thermal resistant aluminium alloy conductor steel reinforced (GTACSR), Gap type super thermal resistant aluminium alloy conductor steel reinforced (GZTACSR). Bundle conductor and its advantages. Importance of sag, Sag calculation – supports at same and different levels, effect of wind and ice. Line vibration and vibration dampers. Overhead line protection against lightning; ground wires. |  |            |                       |
| <b>Overhead line Insulators:</b> A brief introduction to types of insulators, material used- porcelain, toughened glass and polymer (composite). Potential distribution over a string of suspension insulators. String efficiency, Methods of increasing string efficiency. Arcing horns. ■  |  |            |                       |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.  |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Line parameters:</b> Introduction to line parameters- resistance, inductance and capacitance. Calculation of inductance of single phase and three phase lines with equilateral spacing, unsymmetrical spacing, double circuit and transposed lines. Inductance of composite – conductors, geometric mean radius (GMR) and geometric mean distance (GMD). Calculation of capacitance of single phase and three phase lines with equilateral spacing, unsymmetrical spacing, double circuit and transposed lines. Capacitance of composite – conductor, geometric mean radius (GMR) and geometric mean distance (GMD). Advantages of single circuit and double circuit lines. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Performance of transmission lines:</b> Classification of lines – short, medium and long. Current and voltage relations, line regulation and Ferranti effect in short length lines, medium length lines considering Nominal T and nominal $\pi$ circuits, and long lines considering hyperbolic form equations. Equivalent circuit of a long line. ABCD constants in all cases. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Corona:</b> Phenomena, disruptive and visual critical voltages, corona loss. Advantages and disadvantages of corona. Methods of reducing corona.  |  |            | <b>10</b>             |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING (EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER -IV  |   |                          |                    |                               |
|--|---|--------------------------|--------------------|-------------------------------|
| 15EE43 TRANSMISSION AND DISTRIBUTION (Core Subject) (continued)  |   |                          |                    |                               |
| Module-4 (continued)   |   |                          |                    | Teaching Hours                |
| <b>Underground cable:</b> Types of cables, constructional features, insulation resistance, thermal rating, charging current, grading of cables – capacitance and inter-sheath. Dielectric loss. Comparison between ac and dc cables. Limitations of cables. Specification of power cables. ■   |   |                          |                    |                               |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.  |                          |                    |                               |
| Module-5   |   |                          |                    |                               |
| <b>Distribution:</b> Primary AC distribution systems – Radial feeders, parallel feeders, loop feeders and interconnected network system. Secondary AC distribution systems – Three phase 4 wire system and single phase 2 wire distribution, AC distributors with concentrated and uniform loads. Effect of disconnection of neutral in a 3 phase four wire system.<br><b>Reliability and Quality of Distribution system:</b> Introduction, definition of reliability, failure, probability concepts, limitation of distribution systems, power quality, Reliability aids. ■                             |   |                          |                    | 10                            |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.  |                          |                    |                               |
| <b>Course Outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"><li>• Explain the concepts of various methods of generation of power.</li><li>• Explain the importance of HVAC, EHVAC, UHVAC and HVDC transmission.</li><li>• Design and analyze overhead transmission system for a given voltage level.</li><li>• Calculate the parameters of the transmission line for different configurations and assess the performance of line.</li><li>• Explain the use of underground cables and evaluate different types of distribution systems.</li></ul> |   |                          |                    |                               |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Design / development of solutions, Engineers and society, Ethics.  |   |                          |                    |                               |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"><li>• The question paper will have ten questions.</li><li>• Each full question is for 16 marks.</li><li>• There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.</li><li>• Each full question with sub questions will cover the contents under a module.</li><li>• Students will have to answer 5 full questions, selecting one full question from each module. ■</li></ul>   |   |                          |                    |                               |

| ELECTRIC MOTORS (Core Subject)   |  |            |                       |
| Subject Code   | 15EE44   | IA Marks   | 20                    |
| Number of Lecture Hours/Week   | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 50   | Exam Marks | 80                    |
| Credits - 04   |  |            |                       |
| <b>Course Objectives:</b> <ul style="list-style-type: none"><li>• To study the constructional features of Motors and select a suitable drive for specific application.</li><li>• To study the constructional features of Three Phase and Single phase induction Motors.</li><li>• To study different test to be conducted for the assessment of the performance characteristics of motors.</li><li>• To study the speed control of motor by a different methods.</li><li>• Explain the construction and operation of Synchronous motor and special motors.</li></ul>                                     |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>DC Motors:</b> Classification, Back emf, Torque equation, and significance of back emf, Characteristics of shunt, series & compound motors. Speed control of shunt, series and compound motors. Application of motors. DC motor starters – 3 point and 4 point.<br><b>Losses and efficiency-</b> Losses in DC motors, power flow diagram, efficiency, condition for maximum efficiency. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Testing of dc motors:</b> Direct & indirect methods of testing of DC motors-Brake test, Swinburne's test, Retardation test, Hopkinson's test, Field's test, merits and demerits of tests.<br><b>Three phase Induction motors:</b> Review of concept and generation of rotating magnetic field, Principle of operation, construction, classification and types; squirrel-cage, slip-ring (No question shall be set from the review portion). Slip, Torque equation, torque-slip characteristic covering motoring, generating and braking regions of operation, Maximum torque, significance of slip. ■ |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Performance of three-phase Induction Motor:</b> Phasor diagram of induction motor on no-load and on load, equivalent circuit, losses, efficiency, No-load and blocked rotor tests. Performance of the motor from the circle diagram and equivalent circuit. Cogging and crawling. High torque rotors-double cage and deep rotor bars. Equivalent circuit and performance evaluation of double cage induction motor. Induction motor working as induction generator; standalone operation and grid connected operation. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Starting and speed Control of Three-phase Induction Motors:</b> Need for starter. Direct on line, Star-Delta and autotransformer starting. Rotor resistance starting. Speed control by voltage, frequency, and rotor resistance methods<br><b>Single-phase Induction Motor:</b> Double revolving field theory and principle of operation. Construction and operation of split-phase, capacitor start, capacitor run, and shaded pole motors. Comparison of single phase motors and applications. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-5</b>  |  |            |                       |
| <b>Synchronous motor:</b> Principle of operation, phasor diagrams, torque and torque angle, Blondel diagram, effect of change in load, effect of change in excitation, V and inverted V curves. Synchronous condenser, hunting and damping. Methods of starting synchronous motors.  |  |            | <b>10</b>             |

| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Vector Analysis:</b> Scalars and Vectors, Vector algebra, Cartesian co-ordinate system, Vector components and unit vectors. Scalar field and Vector field. Dot product and Cross product, Gradient of a scalar field. Divergence and Curl of a vector field. Co – ordinate systems: cylindrical and spherical, relation between different coordinate systems. Expression for gradient, divergence and curl in rectangular, cylindrical and spherical co-ordinate systems. Problems.<br><b>Electrostatics:</b> Coulomb's law, Electric field intensity and its evaluation for (i) point charge (ii) line charge (iii) surface charge (iv) volume charge distributions. Electric flux density, Gauss law and its applications. Maxwell's first equation (Electrostatics). Divergence theorem. Problems. ■ |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Energy and Potential:</b> Energy expended in moving a point charge in an electric field. The line integral. Definition of potential difference and potential. The potential field of a point charge and of a system of charges. Potential gradient. The dipole. Energy density in the electrostatic field. Problems.<br><b>Conductor and Dielectrics:</b> Current and current density. Continuity of current. Metallic conductors, conductor's properties and boundary conditions. Perfect dielectric materials, capacitance calculations. Parallel plate capacitor with two dielectrics with dielectric interface parallel to the conducting plates. Capacitance of two wire line. Problems. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Poisson's and Laplace equations:</b> Derivations and problems, Uniqueness theorem.<br><b>Steady magnetic fields:</b> Biot - Savart's law, Ampere's circuital law. The Curl. Stokes theorem. Magnetic flux and flux density. Scalar and vector magnetic potentials. Problems. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Magnetic forces:</b> Force on a moving charge and differential current element. Force between differential current elements. Force and torque on a closed circuit. Problems.<br><b>Magnetic materials and magnetism:</b> Nature of magnetic materials, magnetisation and permeability. Magnetic boundary conditions. Magnetic circuit, inductance and mutual inductance. Problems. ■  |  |            | <b>10</b>             |

| Subject Code  | 15EE51  | IA Marks   | 20                    |
| Number of Lecture Hours/Week  | 04  | Exam Hours | 03                    |
| Total Number of Lecture Hours   | 50  | Exam Marks | 80                    |
| Credits – 04  |   |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To introduce the field of management, task of the manager, importance of planning and types of planning, staff recruitment and selection process.</li><li>To discuss the ways in which work is allocation, structure of organizations, modes of communication and importance of managerial control in business.</li><li>To explain need of coordination between the manager and staff, the social responsibility of business and leadership.</li><li>To explain the role and importance of the entrepreneur in economic development and the concept of entrepreneurship.</li><li>To explain various types of entrepreneurs and their functions, the myths of entrepreneurship and the factors required for capacity building for entrepreneurs</li><li>To discuss the importance of Small Scale Industries and the related terms and problems involved.</li><li>To discuss methods for generating new business ideas and business opportunities in India and the importance of business plan.</li><li>To introduce the concepts of project management and discuss capital building process.</li><li>To explain project feasibility study and project appraisal and discuss project financing</li><li>To discuss about different institutions at state and central levels supporting business enterprises. ■</li></ul> |   |            |                       |
| <b>Module-1</b>   |   |            | <b>Teaching Hours</b> |
| <b>Management:</b> Definition, Importance – Nature and Characteristics of Management, Management Functions, Roles of Manager, Levels of Management, Managerial Skills, Management & Administration, Management as a Science, Art & Profession.<br><b>Planning:</b> Nature, Importance and Purpose Of Planning, Types of Plans, Steps in Planning, Limitations of Planning, Decision Making – Meaning, Types of Decisions- Steps in Decision Making. ■   |   |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>   |   |            |                       |
| <b>Organizing and Staffing:</b> Meaning, Nature and Characteristics of Organization – Process of Organization, Principles of Organization, Departmentalization, Committees – meaning, Types of Committees, Centralization Versus Decentralization of Authority and Responsibility, Span of Control (Definition only), Nature and Importance of Staffing, Process of Selection and Recruitment.<br><b>Directing and Controlling:</b> Meaning and Nature of Directing-Leadership Styles, Motivation Theories Communication – Meaning and Importance, Coordination- Meaning and Importance, Techniques of Coordination. Controlling – Meaning, Steps in Controlling. ■   |   |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing.    |            |                       |
| <b>Module-3</b>   |   |            |                       |
| <b>Social Responsibilities of Business:</b> Meaning of Social Responsibility, Social Responsibilities of Business towards Different Groups, Social Audit, Business Ethics and Corporate Governance.<br><b>Entrepreneurship:</b> Definition of Entrepreneur, Importance of Entrepreneurship, concepts of Entrepreneurship, Characteristics of successful Entrepreneur, Classification of Entrepreneurs, Intrapreneur – An Emerging Class, Comparison between Entrepreneur and Intrapreneur, Myths of Entrepreneurship, Entrepreneurial Development models, Entrepreneurial development cycle, Problems faced by Entrepreneurs and capacity building for Entrepreneurship. ■  |   |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>3</sub> – Applying.  |            |                       |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER – V   |  |                |
|--|--|----------------|
| 15EE51 MANAGEMENT AND ENTREPRENEURSHIP (Core Course) (continued)   |  |                |
| Module-4   |  | Teaching Hours |
| <b>Modern Small Business Enterprises:</b> Role of Small Scale Industries, Concepts and definitions of SSI Enterprises, Government policy and development of the Small Scale sector in India, Growth and Performance of Small Scale Industries in India, Sickness in SSI sector, Problems for Small Scale Industries, Impact of Globalization on SSI, Impact of WTO/GATT on SSIs, Ancillary Industry and Tiny Industry (Definition only).<br><b>Institutional Support for Business Enterprises:</b> Introduction, Policies & Schemes of Central–Level Institutions, State-Level Institutions.■  |  | 10             |
| Revised Bloom’s Taxonomy Level   | L <sub>3</sub> – Applying.   |                |
| Module-5   |  | 10             |
| <b>Project Management:</b> Meaning of Project, Project Objectives & Characteristics, Project Identification-Meaning & Importance; Project Life Cycle, Project Scheduling, Capital Budgeting, Generating an Investment Project Proposal, Project Report-Need and Significance of Report, Contents, Formulation, Project Analysis-Market, Technical, Financial, Economic, Ecological, Project Evaluation and Selection, Project Financing, Project Implementation Phase, Human & Administrative aspects of Project Management, Prerequisites for Successful Project Implementation.<br>New Control Techniques- PERT and CPM, Steps involved in developing the network, Uses and Limitations of PERT and CPM.■  |  |                |
| Revised Bloom’s Taxonomy Level   | L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |                |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to:   |  |                |
| <ul style="list-style-type: none"><li>• Explain the field of management, task of the manager, planning and the need of proper staff, recruitment and selection process.</li><li>• Discuss work allocation, the structure of organization, the modes of communication and importance of managerial control in business.</li><li>• To explain need of coordination between the manager and staff in exercising the authority and delegating duties.</li><li>• To explain the social responsibility of business and leadership</li><li>• Explain the concepts of entrepreneurship and the role and importance of the entrepreneur in economic development.</li><li>• Show an understanding of the role and importance of Small Scale Industries, business plan and its presentation.</li><li>• Discuss the concepts of project management, capitol building process, project feasibility study, project appraisal and project financing.</li><li>• Discuss the state /central level institutions / agencies supporting business enterprises.■</li></ul> |  |                |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Life-Long Learning, Accomplishment of Complex Problems.  |  |                |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"><li>• The question paper will have ten full questions carrying equal marks. Each full question consisting of 16 marks.</li><li>• There will be two full questions (with a maximum of four sub questions) from each module.</li><li>• Each full question will have sub question covering all the topics under a module.</li><li>• The students will have to answer five full questions, selecting one full question from each module. ■</li></ul>  |  |                |

| Number of Lecture Hours/Week   | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 50   | Exam Marks | 80                    |
| Credits – 04   |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To explain the internal organization and working of Computers, microcontrollers and embedded processors.</li><li>Compare and contrast the various members of the 8051 family.</li><li>To explain the registers of the 8051 microcontroller, manipulation of data using registers and MOV instructions.</li><li>To explain in detail the execution of 8051 Assembly language instructions and data types</li><li>To explain loop, conditional and unconditional jump and call, handling and manipulation of I/O instructions.</li><li>To explain different addressing modes of 8051, arithmetic, logic instructions, and programs.</li><li>To explain develop 8051C programs for time delay, I/O operations, I/O bit manipulation,logic, arithmetic operations and data conversion. ■</li></ul> |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>8051 Microcontroller Basics:</b> Inside the Computer, Microcontrollers and Embedded Processors, Block Diagram of 8051, PSW and Flag Bits, 8051 Register Banks and Stack, Internal Memory Organization of 8051, IO Port Usage in 8051, Types of Special Function Registers and their uses in 8051, Pins Of 8051. Memory Address Decoding, 8031/51 Interfacing With External ROM And RAM.8051 Addressing Modes. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Assembly programming and instruction of 8051:</b> Introduction to 8051 assembly programming, Assembling and running an 8051 program, Data types and Assembler directives, Arithmetic, logic instructions and programs, Jump, loop and call instructions, IO port programming. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>8051 programming in C:</b> Data types and time delay in 8051C, IO programming in 8051C, Logic operations in 8051 C, Data conversion program in 8051 C, Accessing code ROM space in 8051C, Data serialization using 8051C<br><b>8051 Timer programming in Assembly and C:</b> Programming 8051 timers, Counter programming, Programming timers 0 and 1 in 8051 C.■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying,L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating.   |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>8051 serial port programming in assembly and C:</b> Basics of serial communication, 8051 connection to RS232, 8051 serial port programming in assembly, serial port programming in 8051 C.<br><b>8051 Interrupt programming in assembly and C:</b> 8051 interrupts, Programming timer, external hardware, serial communication interrupt, Interrupt priority in 8051/52, Interrupt programming in C. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |

| Subject Code  | 15EE552   | IA Marks   | 20                    |
| Number of Lecture Hours/Week  | 03  | Exam Hours | 03                    |
| Total Number of Lecture Hours   | 40  | Exam Marks | 80                    |
| Credits – 03  |   |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To impart the knowledge of conducting, dielectric, insulating and magnetic materials and their applications.</li><li>To impart the knowledge of superconducting materials and their applications</li><li>To impart the knowledge of plastics and materials for Opto - Electronic devices. ■</li></ul>   |   |            |                       |
| <b>Module-1</b>   |   |            | <b>Teaching Hours</b> |
| <b>Introduction to Electrical and Electronic Materials:</b> Importance of materials, Classification of electrical and electronic materials, Scope of electrical and electronic materials, Requirement of Engineering materials, Operational requirements of electrical and electronic materials, Classification of solids on the basis of energy gap, Products – working principle and materials, Types of engineering materials, Levels of material structure. Spintronics and Spintronic materials, Ferromagnetic semiconductors, Left handed materials.<br><b>Conductors:</b> Conductor materials, Factors affecting conductivity, Thermal conductivity, Heating effect of current, Thermoelectric effect, Seebeck effect, Thomson effect, Wiedemann – Franz law and Lorentz relation, Problems . ■  |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                       |
| <b>Module-2</b>   |   |            |                       |
| <b>Conductive Materials and Applications:</b> Mechanically processed forms of electrical materials, Types of conducting materials, Low resistivity materials, High resistivity materials, Contact materials, Fusible materials, Filament materials, Carbon as filamentary and brush material, Material for conductors, cables, wires, solder, sheathing and sealing.<br><b>Dielectrics:</b> Introduction to dielectric materials, classification of dielectric materials, Dielectric constant, Dielectric strength and Dielectric loss. Polarization, Mechanisms of polarization, Comparison of different polarization process, Factors affecting polarization, Spontaneous polarization, Behaviour of polarization under impulse and frequency switching, Decay and build-up of polarization under ac field, Complex dielectric constant. ■  |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                       |
| <b>Module-3</b>   |   |            |                       |
| <b>Insulating Materials:</b> Insulating materials and applications – Ceramic, Mica, Porcelain, Glass, Micanite and Glass bonded mica. Polymeric materials – Bakelite, Polyethylene. Natural and synthetic rubber. Paper. Choice of solid insulating material for different applications, Liquid insulating materials – Requirements, Transformer oil, Bubble theory, Aging of mineral insulating oils. Gaseous insulating Materials – Air, Nitrogen, Vacuum.<br><b>Magnetic Materials:</b> Origin of permanent magnetic dipole, Magnetic terminology, Relation between relative permeability and magnetic susceptibility. Classification of magnetic materials, Diamagnetic, Paramagnetism, Ferromagnetism, Antiferromagnetism and the corresponding materials. Ferrimagnetism and ferrites – properties and applications, Soft and hard ferrites. Curie temperature, Laws of magnetic materials. Magnetization curve, Initial and maximum permeability. Hysteresis loop and loss, Eddy current loss. ■ |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |            |                       |
| <b>Module-4</b>   |   |            |                       |
| <b>Magnetic Materials (continued):</b> Types of magnetic materials, Soft and hard magnetic materials, High energy magnetic materials, Commercial grade soft and hard magnetic materials.<br><b>Superconductive Materials:</b> Concept of superconductors, Meaning of phenomenon of superconductivity, Properties of superconductors, Types of superconductors, Critical magnetic field  |   |            | <b>08</b>             |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER – V  |   |                              |             |                                 |
|---|---|------------------------------|-------------|---------------------------------|
| 15EE552 ELECTRICAL ENGINEERING MATERIALS (Professional Elective) (continued)  |   |                              |             |                                 |
| Module-4 (continued)  |   |                              |             | Teaching Hours                  |
| <b>Superconductive Materials (continued):</b> and critical temperature, Effects of Isotopic mass on critical temperature, Silsbee rule, Depth of penetration and coherence length. Ideal and Hard superconductors, Mechanism of super conduction, London’s theory for Type I superconductors, GLAG theory for Type I superconductors, BCS theory, Applications and limitations. Applications of high temperature superconductors, Superconducting solenoids and magnets, MRI for medical diagnostics.■  |   |                              |             |                                 |
| Revised Bloom’s Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.             |                              |             |                                 |
| Module-5  |   |                              |             |                                 |
| <b>Plastics:</b> Introduction, Thermoplastics, Rubbers, Thermosets, DC and AC properties, Mechanical properties and processing of plastic.<br><b>Materials for Opto – Electronic Devices:</b> Introduction, Optical phenomena, Reflection, Refraction, Transmittivity, Scattering, Optical absorption, Optical properties of non-metals, Optical properties of metals, Optical properties of semiconductors, Optical properties of insulators. Luminescence, Opto – Electronic devices, Photoconductivity, Photoconductive cell.■   |   |                              |             | 08                              |
| Revised Bloom’s Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.             |                              |             |                                 |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"><li>• Discuss electrical and electronics materials, their importance, classification and operational requirement</li><li>• Discuss conducting materials used in engineering, their properties and classification.</li><li>• Discuss dielectric materials used in engineering, their properties and classification.</li><li>• Discuss insulating materials used in engineering, their properties and classification.</li><li>• Discuss magnetic materials used in engineering, their properties and classification</li><li>• Explain the phenomenon superconductivity, super conducting materials and their application in engineering.</li><li>• Explain the plastic and its properties and applications.</li><li>• Discuss materials used for Opto electronic devices.■</li></ul> |   |                              |             |                                 |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge  |   |                              |             |                                 |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"><li>• The question paper will have ten questions.</li><li>• Each full question is for 16 marks.</li><li>• There will be 2full questions (with a maximum of four sub questions in one full question) from each module.</li><li>• Each full question with sub questions will cover the contents under a module.</li><li>• Students will have to answer 5 full questions, selecting one full question from each module.■</li></ul>  |   |                              |             |                                 |

| ELECTRICAL ESTIMATION AND COSTING (Professional Elective)   |  |            |                       |
| Subject Code  | 15EE553  | IA Marks   | 20                    |
| Number of Lecture Hours/Week  | 03   | Exam Hours | 03                    |
| Total Number of Lecture Hours   | 40   | Exam Marks | 80                    |
| Credits - 03  |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To discuss the purpose of estimation and costing.</li><li>To discuss market survey, estimates, purchase enquiries, tenders, comparative statement and payment of bills and Indian electricity act and some of the rules.</li><li>To discuss distribution of energy in a building, wiring and methods of wiring, cables used in internal wiring, wiring accessories, fittings and fuses.</li><li>To discuss design of lighting points and its number, total load, sub-circuits, size of conductor.</li><li>To discuss different types of service mains and estimation of power circuits.</li><li>To discuss estimation of overhead transmission and distribution system and its components.</li></ul> To discuss main components of a substation, their graphical representation and preparation of single line diagram of a substation. ■ |  |            |                       |
| <b>Module-1</b>   |  |            | <b>Teaching Hours</b> |
| <b>Principles of Estimation:</b> Introduction to Estimation and Costing, Electrical Schedule, Catalogues, Market Survey and Source Selection, Recording of Estimates, Determination of Required Quantity of Material, Labour Conditions, Determination of Cost Material and Labour, Contingencies, Overhead Charges, Profit, Purchase System, Purchase Enquiry and Selection of Appropriate Purchase Mode, Comparative Statement, Purchase Orders, Payment Of Bills, Tender Form, General Idea about IE Rule, Indian Electricity(IE) Act and IE Rules -29,30,45,46,47,50,51,54,55,77 and 79. ■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.  |            |                       |
| <b>Module-2</b>   |  |            |                       |
| <b>Wiring:</b> Introduction, Distribution of energy in a Building, PVC Casing and Capping, Conduit Wiring, Desirabilities of Wiring. Types of cables used in Internal Wiring, Multi Strand Cables, Voltage Grading and Specification of Cables<br><b>Wiring (continued):</b> Main Switch and Distribution Board, Conduits and its accessories and Fittings. Lighting Accessories and Fittings, Types of Fuses, Size of Fuse, Fuse Units, Earthing Conductor.<br><b>Internal Wiring:</b> General rules for wiring, Design of Lighting Points (Refer to Seventh Chapter of the Textbook), Number of Points, Determination of Total Load, Number of Sub –Circuits, Ratings Main Switch and Distribution Board and Size of Conductor. Current Density, Layout. .. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>   |  |            |                       |
| <b>Service Mains:</b> Introduction, Types, Estimation of Underground and Overhead Service Connections.<br><b>Design and Estimation of Power Circuits:</b> Introduction, Important Considerations Regarding Motor Installation Wiring, Input Power, Input Current to Motors, Rating of Cables, Rating of Fuse, Size of Condit, Distribution Board Main Switch and Starter. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>   |  |            |                       |
| <b>Estimation of Overhead Transmission and Distribution Lines:</b> (Review of Line Supports, Conductor Materials, Size of Conductor for Overhead Transmission Line, Types of Insulators)[No Question Shall be Set From the Review Portion].<br>Cross Arms, Pole Brackets and Clamps, Guys and Stays, Conductors Configuration Spacing and Clearances, Span Lengths, Lightning Arrestors, Phase Plates, Danger Plates, Anti Climbing Devices, Bird Guards, Beads of Jumpers, Muffs, Points to be Considered at the Time of Erection of Overhead Lines, Erection of Supports, Setting of Stays, Fixing of Cross Arms, Fixing of Insulators, Conductor Erection.   |  |            | <b>08</b>             |
|   |  |            |                       |

| Credits - 03  |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To discuss causes of energy scarcity and its solution, energy resources and availability of renewable energy.</li><li>To explain sun – earth geometric relationship, Earth – Sun Angles and their Relationships</li><li>To discuss about solar energy reaching the Earth’s surface and solar thermal energy applications.</li><li>To discuss types of solar collectors, their configurations and their applications</li><li>To explain the components of a solar cell system, equivalent circuit of a solar cell, its characteristics and applications.</li><li>To discuss benefits of hydrogen energy, production of hydrogen energy, storage its advantages and disadvantages.</li><li>To discuss wind turbines, wind resources, site selection for wind turbine</li><li>To discuss geothermal systems, their classification and geothermal based electric power generation</li><li>To discuss waste recovery management systems, advantages and disadvantages</li><li>To discuss biomass production, types of biomass gasifiers, properties of producer gas.</li><li>To discuss biogas, its composition, production, benefits.</li><li>To discuss tidal energy resources, energy availability, power generation.</li><li>To explain motion in the sea wave, power associated with sea wave and energy availability and the devices for harnessing wave energy.</li><li>To discuss principles of ocean thermal energy conversion and production of electricity. ■</li></ul> |  |            |                       |
| <b>Module-1</b>   |  |            | <b>Teaching Hours</b> |
| <b>Introduction:</b> Causes of Energy Scarcity, Solution to Energy Scarcity, Factors Affecting Energy Resource Development, Energy Resources and Classification, Renewable Energy – Worldwide Renewable Energy Availability, Renewable Energy in India.<br><b>Energy from Sun:</b> Sun- earth Geometric Relationship, Layer of the Sun, Earth – Sun Angles and their Relationships, Solar Energy Reaching the Earth’s Surface, Solar Thermal Energy Applications. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>   |  |            |                       |
| <b>Solar Thermal Energy Collectors:</b> Types of Solar Collectors, Configurations of Certain Practical Solar Thermal Collectors, Material Aspects ofSolar Collectors, Concentrating Collectors, Parabolic Dish – Stirling Engine System, Working of Stirling or Brayton Heat Engine, Solar Collector Systems into Building Services, Solar Water Heating Systems, Passive Solar Water Heating Systems, Applications of Solar Water Heating Systems, Active Solar Space Cooling, Solar Air Heating, Solar Dryers, Crop Drying, Space Cooing, Solar Cookers, Solar pond.<br><b>Solar Cells:</b> Components of Solar Cell System, Elements of Silicon Solar Cell, Solar Cell materials, Practical Solar Cells, I – V Characteristics of Solar Cells, Efficiency of Solar Cells, Photovoltaic Panels, Applications of Solar Cell Systems. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom’s Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>   |  |            |                       |
| <b>Hydrogen Energy:</b> Benefits of Hydrogen Energy, Hydrogen Production Technologies, Hydrogen Energy Storage, Use of Hydrogen Energy, Advantages and Disadvantages of Hydrogen Energy, Problems Associated with Hydrogen Energy.<br><b>Wind Energy:</b> Windmills, Wind Turbines, Wind Resources, Wind Turbine Site Selection.<br><b>Geothermal Energy:</b> Geothermal Systems, Classifications, Geothermal Resource Utilization, Resource Exploration, Geothermal Based Electric Power Generation, Associated Problems, environmental Effects.   |  |            | <b>08</b>             |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - V  |  |                |
|---|--|----------------|
| 15EE563 RENEWABLE ENERGY RESOURCES(Open Elective) (continued)   |  |                |
| Module-3 (continued)  |  | Teaching Hours |
| Solid waste and Agricultural Refuse: Waste is Wealth, Key Issues, Waste Recovery Management Scheme, Advantages and Disadvantages of Waste Recycling, Sources and Types of Waste, Recycling of Plastics. ■   |  |                |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |                |
| Module-4  |  |                |
| Biomass Energy: Biomass Production, Energy Plantation, Biomass Gasification, Theory of Gasification, Gasifier and Their Classifications, Chemistry of Reaction Process in Gasification, Updraft, Downdraft and Cross-draft Gasifiers, Fluidized Bed Gasification, Use of Biomass Gasifier, Gasifier Biomass Feed Characteristics, Applications of Biomass Gasifier, Cooling and Cleaning of Gasifiers.<br>Biogas Energy: Introduction, Biogas and its Composition, Anaerobic Digestion, Biogas Production, Benefits of Biogas, Factors Affecting the Selection of a Particular Model of a Biogas Plant, Biogas Plant Feeds and their Characteristics.<br>Tidal Energy: Introduction, Tidal Energy Resource, Tidal Energy Availability, Tidal Power Generation in India, Leading Country in Tidal Power Plant Installation, Energy Availability in Tides, Tidal Power Basin, Turbines for Tidal Power, Advantages and Disadvantages of Tidal Power, Problems Faced in Exploiting Tidal Energy. ■ |  | 08             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |                |
| Module-5  |  |                |
| Sea Wave Energy: Introduction, Motion in the sea Waves, Power Associated with Sea Waves, Wave Energy Availability, Devices for Harnessing Wave Energy, Advantages and Disadvantages of Wave Power.<br>Ocean Thermal Energy: Introduction, Principles of Ocean Thermal Energy Conversion (OTEC), Ocean Thermal Energy Conversion plants, Basic Rankine Cycle and its Working, Closed Cycle, Open Cycle and Hybrid Cycle, Carnot Cycle, Application of OTEC in Addition to Produce Electricity, Advantages, Disadvantages and Benefits of OTEC. ■   |  | 08             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |                |
| Course outcomes:<br>At the end of the course the student will be able to:   |  |                |
| <ul style="list-style-type: none"><li>• Discuss causes of energy scarcity and its solution, energy resources and availability of renewable energy.</li><li>• Discuss energy from sun, energy reaching the Earth's surface and solar thermal energy applications.</li><li>• Discuss types of solar collectors, their configurations, solar cell system, its characteristics and their applications.</li><li>• Discuss generation of energy from hydrogen, wind, geothermal system, solid waste and agriculture refuse.</li><li>• Discuss production of energy from biomass, biogas.</li><li>• Discuss tidal energy resources, energy availability and power generation.</li><li>• Discuss power generation sea wave energy and ocean thermal energy. ■</li></ul>   |  |                |
| Graduate Attributes (As per NBA)<br>Engineering Knowledge, Problem Analysis, Modern tool usage, Ethics.   |  |                |
| Question paper pattern:   |  |                |
| <ul style="list-style-type: none"><li>• The question paper will have ten questions.</li><li>• Each full question is for 16 marks.</li><li>• There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.</li><li>• Each full question with sub questions will cover the contents under a module.</li></ul>  |  |                |

|---|--|------------|----|
| MICROCONTROLLER LABORATORY - 1  |  |            |    |
| Subject Code  | 15EEL57  | IA Marks   | 20 |
| Number of Practical Hours/Week  | 03   | Exam Hours | 03 |
| Total Number of Practical Hours   | 42   | Exam Marks | 80 |
| Credits - 02  |  |            |    |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To explain writing assembly language programs for data transfer, arithmetic, Boolean and logical instructions.</li><li>To explain writing assembly language programs for code conversions.</li><li>To explain writing assembly language programs using subroutines for generation of delays, counters, configuration of SFRs for serial communication and timers.</li><li>To perform interfacing of stepper motor and dc motor for controlling the speed.</li><li>To explain generation of different waveforms using DAC interface. ■</li></ul>   |  |            |    |
| Sl. NO  | Experiments  |            |    |
| <b>Note:</b> For the experiments 1 to 6, 8051 assembly programming is to be used.   |  |            |    |
| 1   | Data transfer – Program for block data movement, sorting, exchanging, finding largest element in an array.   |            |    |
| 2   | Arithmetic instructions: Addition, subtraction, multiplication and division. Square and cube operations for 16 bit numbers.  |            |    |
| 3   | Counters   |            |    |
| 4   | Boolean and logical instructions (bit manipulation).   |            |    |
| 5   | Conditional call and return instructions.  |            |    |
| 6   | Code conversion programs – BCD to ASCII, ASCII to BCD, ASCII to decimal, Decimal to ASCII, Hexa decimal to and Decimal to Hexa.  |            |    |
| 7   | Programs to generate delay, Programs using serial port and on-chip timer/counters.   |            |    |
| <b>Note:</b> Single chip solution for interfacing 8051 is to be with C Programs for the following experiments.  |  |            |    |
| 8   | Stepper motor interface.   |            |    |
| 9   | DC motor interface for direction and speed control using PWM.  |            |    |
| 10  | Alphanumeric LCD panel interface.  |            |    |
| 11  | Generate different waveforms: Sine, Square, Triangular, Ramp using DAC interface.  |            |    |
| 12  | External ADC and Temperature control interface.  |            |    |
| 13  | Elevator interface.  |            |    |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating, L <sub>6</sub> – Creating. |            |    |
| <b>Course outcomes:</b> <p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"><li>Write assembly language programs for data transfer, arithmetic, Boolean and logical instructions.</li><li>Write ALP for code conversions.</li><li>Write ALP using subroutines for generation of delays, counters, configuration of SFRs for serial communication and timers.</li><li>Perform interfacing of stepper motor and dc motor for controlling the speed.</li><li>Generate different waveforms using DAC interface.</li><li>Work with a small team to carryout experiments using microcontroller concepts and prepare reports that present lab work. ■</li></ul> |  |            |    |
| <b>Graduate Attributes (As per NBA)</b> <p>Engineering Knowledge, Problem Analysis, Individual and Team work, Modern tool usage, Communication.</p>   |  |            |    |

| Total Number of Practical Hours   | 42  | Exam Marks | 80 |
| Credits - 02  |   |            |    |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To conduct experiments on semiconductor devices to obtain their static characteristics.</li><li>To study different methods of triggering the SCR</li><li>To study the performance of single phase controlled full wave rectifier and AC voltage controller with R and RL loads.</li><li>To control the speed of a dc motor, universal motor and stepper motors.</li><li>To study single phase full bridge inverter connected to resistive load.</li><li>To study commutation of SCR. ■</li></ul>  |   |            |    |
| <b>Sl. No</b>   | <b>Experiments</b>  |            |    |
| 1   | Static Characteristics of SCR.  |            |    |
| 2   | Static Characteristics of MOSFET and IGBT.  |            |    |
| 3   | Characteristic of TRIAC.  |            |    |
| 4   | SCR turn on circuit using synchronized UJT relaxation oscillator.   |            |    |
| 5   | SCR digital triggering circuit for a single phase controlled rectifier and ac voltage regulator.              |            |    |
| 6   | Single phase controlled full wave rectifier with R and R –L loads.  |            |    |
| 7   | AC voltage controller using TRIAC and DIAC combination connected to R and RL loads.                           |            |    |
| 8   | Speed control of dc motor using single semi converter.  |            |    |
| 9   | Speed control of stepper motor.   |            |    |
| 10  | Speed control of universal motor using ac voltage regulator.  |            |    |
| 11  | Speed control of a separately excited D.C. Motor using an IGBT or MOSFET chopper.                             |            |    |
| 12  | Design of Snubber circuit.  |            |    |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating, L <sub>6</sub> – Creating |            |    |
| <b>Course outcomes:</b> <p>At the end of the course the student will be able to:</p> <ul style="list-style-type: none"><li>Obtain static characteristics of semiconductor devices to discuss their performance.</li><li>Trigger the SCR by different methods</li><li>Verify the performance of single phase controlled full wave rectifier and AC voltage controller with R and RL loads.</li><li>Control the speed of a dc motor, universal motor and stepper motors.</li><li>Verify the performance of single phase full bridge inverter connected to resistive load.</li><li>Perform commutation of SCR by different methods.■</li></ul> |   |            |    |
| <b>Graduate Attributes (As per NBA)</b> <p>Engineering Knowledge, Problem Analysis, Individual and Team work, Communication.</p>  |   |            |    |
| <b>Conduct of Practical Examination:</b> <ol style="list-style-type: none"><li>All laboratory experiments are to be included for practical examination.</li><li>Breakup of marks and the instructions printed on the cover page of answer script to be strictly adhered by the examiners.</li><li>Students can pick one experiment from the questions lot prepared by the examiners.</li><li>Change of experiment is allowed only once and 15% Marks allotted to the procedure part to be made zero. ■</li></ol>  |   |            |    |

## VI SEMESTER DETAILED SYLLABUS

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - VI  |  |            |                       |
|--|--|------------|-----------------------|
| CONTROL SYSTEMS (Core Subject)   |  |            |                       |
| Subject Code   | 15EE61   | IA Marks   | 20                    |
| Number of Lecture Hours/Week   | 04   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 50   | Exam Marks | 80                    |
| Credits - 04   |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>• To define a control system</li><li>• To explain the necessity of feedback and types of feedback control systems.</li><li>• To introduce the concept of transfer function and its application to the modeling of linear systems.</li><li>• To demonstrate mathematical modeling of control systems.</li><li>• To obtain transfer function of systems through block diagram manipulation and reduction</li><li>• To use Mason's gain formula for finding transfer function of a system</li><li>• To discuss transient and steady state time response of a simple control system.</li><li>• To discuss the stability of linear time invariant systems and Routh - Hurwitz criterion</li><li>• To investigate the trajectories of the roots of the characteristic equation when a system parameter is varied.</li><li>• To conduct the control system analysis in the frequency domain.</li><li>• To analyze stability of a control system using Nyquist plot.</li><li>• To discuss stability analysis using Bode plots.</li><li>• To determine the controller or compensator configuration and parameter values relative to how it is connected to the controlled process given the design specifications.■</li></ul> |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Introduction to control systems:</b> Introduction, classification of control systems.<br><b>Mathematical models of physical systems:</b> Modelling of mechanical system elements, electrical systems, Analogous systems, Transfer function, Single input single output systems, Procedure for deriving transfer functions, servomotors, synchros, gear trains. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Block diagram:</b> Block diagram of a closed loop system, procedure for drawing block diagram and block diagram reduction to find transfer function.<br><b>Signal flow graphs:</b> Construction of signal flow graphs, basic properties of signal flow graph, signal flow graph algebra, construction of signal flow graph for control systems. ■   |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Time Domain Analysis:</b> Standard test signals, time response of first order systems, time response of second order systems, steady state errors and error constants, types of control systems.<br><b>Routh Stability criterion:</b> BIBO stability, Necessary conditions for stability, Routh stability criterion, difficulties in formulation of Routh table, application of Routh stability criterion to linear feedback systems, relative stability analysis. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing, L <sub>5</sub> – Evaluating.  |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Root locus technique:</b> Introduction, root locus concepts, construction of root loci, rules for the construction of root locus.<br><b>Frequency Response analysis:</b> Co-relation between time and frequency response – 2 <sup>nd</sup> order systems only.<br><b>Bode plots:</b> Basic factors $G(i\omega)/H(j\omega)$ , General procedure for constructing bode plots, computation of gain margin and phase margin. ■  |  |            | <b>10</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER - VI   |  |                                  |            |                                |

| Total Number of Lecture Hours  | 40  | Exam Marks | 80                    |
| Credits - 03   |   |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>• To study switching mode regulators and Boost converters, Resonant Pulse Inverters and multilevel inverters</li><li>• To learn the techniques for design and analysis of dc –dc converters, Resonant Pulse Inverters and multilevel inverters</li><li>• To explain the operation and frequency characteristics of resonant inverters and the techniques for zero-voltage and zero-current switching</li><li>• To study the performance parameters of resonant inverters</li><li>• To explain the techniques for analyzing and design of resonant inverters</li><li>• To explain the operation and features of multilevel inverters, their advantages and disadvantages.</li><li>• To explain the control strategy to address capacitor voltage unbalancing.</li><li>• To discuss potential applications of multilevel inverters.</li><li>• To study the types and circuit topologies of power supplies and explain the operation and analysis of power supplies.</li><li>• To study the applications of power electronic devices. ■</li></ul> |   |            |                       |
| <b>Module-1</b>  |   |            | <b>Teaching Hours</b> |
| <b>DC–DC Converters:</b> Switching-Mode Regulators, Comparison of Regulators, Multi-output Boost Converter, Diode Rectifier-Fed Boost Converter, Averaging Models of Converters, State–Space Analysis of Regulators, Design Considerations for Input Filter and Converters, Drive IC for Converters. ■   |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-2</b>  |   |            |                       |
| <b>Resonant Pulse Inverters:</b> Introduction. Series Resonant Inverters, Frequency Response of Series Inverters, Parallel Resonant Inverters, Voltage Controlled Resonant Inverters, Class E Resonant Inverter, Class E Resonant Rectifier, Zero – Current Switching (ZCS) Resonant Converters, Zero Voltage Switching Resonant Converters (ZVS), Comparison between ZCS and ZVS Resonant Converters, Two Quadrant ZVS Resonant Converters, Resonant DC – Link Inverters. ■   |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |   |            |                       |
| <b>Multilevel Inverters:</b> Introduction, Multilevel Concept, Types of Multilevel Inverters, Diode – Clamped Multilevel Inverter, Flying - Capacitors Multilevel Inverter. Cascaded Multilevel Inverter, Applications, Features of Multilevel Inverters, Comparison of Multilevel Converters. ■   |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |   |            |                       |
| <b>Power Supplies:</b> Introduction, DC Power Supplies, AC Power Supplies, Multistage Conversions, Control Circuits, Magnetic Design Considerations. ■   |   |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. L <sub>4</sub> – Analysing  |            |                       |

| B.E ELECTRICAL AND ELECTRONICS ENGINEERING(EEE)<br>CHOICE BASED CREDIT SYSTEM (CBCS)<br>SEMESTER -VI  |  |                   |             |                               |
|---|--|-------------------|-------------|-------------------------------|
| 15EE652 ADVANCED POWER ELECTRONICS (Professional Elective) (continued)  |  |                   |             |                               |
| Module-5  |  |                   |             | Teaching Hours                |
| <b>Residential and Industrial Applications:</b> Introduction, Residential Applications, Industrial Applications.<br><b>Electrical Utility Applications:</b> Introduction, High Voltage DC Transmission, Static VAR Compensators, Interconnection of Renewable Energy Sources and Energy Storage systems to the Utility Grid, Active Filters. ■  |  |                   |             | 08                            |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. L <sub>4</sub> – Analysing |                   |             |                               |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"><li>• Explain the types of switching – mode regulators, Resonant Pulse Inverters and multilevel inverters</li><li>• To discuss the techniques for design and analysis of dc –dc converters, Resonant Pulse Inverters and multilevel inverters</li><li>• Evaluate the performance parameters of resonant inverters</li><li>• Explain the techniques for zero-voltage and zero-current switching of resonant pulse inverters</li><li>• Explain the control strategy to address capacitor voltage unbalancing in multilevel inverters.</li><li>• Discuss the types, topologies operation and analysis of power supplies.</li><li>• Discuss residential, Industrial and Electrical utility applications of power electronic devices. ■ ■</li></ul> |  |                   |             |                               |

| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To expose the students to the concepts of feed forward neural networks.</li><li>To provide adequate knowledge about feedback networks.</li><li>To teach about the concept of fuzziness involved in various systems.</li><li>To provide adequate knowledge about fuzzy set theory. ■</li></ul>  |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Fundamentals of Neural Networks:</b> Basic concepts of Neural networks, Human Brain, Model of an Artificial Neuron, Neural network architectures, Characteristics of Neural Networks, Learning methods, Taxonomy of Neural Network Architectures, Early Neural Network Architectures.<br><b>Back propagation Networks:</b> Architecture of a Back propagation network, the Perceptron Model, The solution, Single layer Artificial Neural Network, Model for Multilayer Perceptron, Back propagation Learning, Illustration, Applications.■ |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Back propagation Networks (continued):</b> Effect of Tuning Parameters of the Back propagation Neural Network, Selection of Various Parameters in BPN, Variations of Standard Back propagation Algorithm.<br><b>Associative Memory:</b> Auto correlators, Hetero correlators: Kosko's Discrete BAM, Wang et al.'s Multiple Training Encoding Strategy, Exponential BAM, Associative Memory for Real-coded Pattern Pairs, Applications, Recent Trends. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Adaptive Resonance Theory:</b> Introduction, ART 1, ART 2, Applications, Sensitivities of Ordering of Data.■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Fuzzy Set Theory:</b> Fuzzy versus Crisp, Crisp sets, Fuzzy Sets, Crisp Relations, FuzzyRelations. ■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. L <sub>3</sub> – Applying. |            |                       |
| <b>Module-5</b>  |  |            |                       |
| <b>Fuzzy Logic And Inference:</b> Crisp Logic, Predicate Logic, Fuzzy Logic, Fuzzy Rule based System, Defuzzification Methods, Applications.<br><b>Type – 2 Fuzzy Sets:</b> Representation of Type – 2 Fuzzy Sets, Operations on Type – 2 Fuzzy Sets, Interval Type – 2 Fuzzy Sets.■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. L <sub>3</sub> – Applying. |            |                       |

| POWER SYSTEM ANALYSIS – 2(Core Course)   |   |            |                |
| Subject Code   | 15EE71  | IA Marks   | 20             |
| Number of Lecture Hours/Week   | 04  | Exam Hours | 03             |
| Total Number of Lecture Hours  | 50  | Exam Marks | 80             |
| Credits - 04   |   |            |                |
| Course objectives:   |   |            |                |
| <ul style="list-style-type: none"><li>To explain formulation of network models and bus admittance matrix for solving load flow problems.</li><li>To discuss solution of nonlinear static load flow equations by different numerical techniques and methods to control voltage profile.</li><li>To discuss optimal operation of generators on a bus bar, optimal unit commitment, reliability considerations and optimum generation scheduling.</li><li>To discuss optimal power flow solution, scheduling of hydro-thermal system, power system security and reliability.</li><li>To explain formulation of bus impedance matrix for the use in short circuit studies on power systems.</li><li>To explain numerical solution of swing equation for multi-machine stability. ■</li></ul> |   |            |                |
| Module-1   |   |            | Teaching Hours |
| Load Flow Studies: Introduction, Network Model Formulation, Formation of $Y_{bus}$ by Singular Transformation, Load Flow Problem, Gauss-Seidel Method.■  |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying L <sub>4</sub> – Analysing. |            |                |
| Module-2   |   |            |                |
| Load Flow Studies (continued):Newton-Raphson Method, Decoupled Load Flow Methods, Comparison of Load Flow Methods, Control of Voltage Profile.■  |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying L <sub>4</sub> – Analysing. |            |                |
| Module-3   |   |            |                |
| Optimal System Operation: Introduction, Optimal Operation of Generators on a Bus Bar, Optimal Unit Commitment, Reliability Considerations, Optimum Generation Scheduling.■   |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying L <sub>4</sub> – Analysing. |            |                |
| Module-4   |   |            |                |
| Optimal System Operation (continued):Optimal Load Flow Solution, Optimal Scheduling of Hydrothermal System, Power System Security, Maintenance Scheduling, Power System Reliability.■  |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying L <sub>4</sub> – Analysing. |            |                |
| Module-5   |   |            |                |
| SymmetricalFault Analysis: Algorithm for Short Circuit Studies, $Z_{bus}$ Formulation. Power System Stability:Numerical Solution of Swing Equation, Multimachine Stability.■   |   |            | 10             |
| Revised Bloom's Taxonomy Level   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying L <sub>4</sub> – Analysing. |            |                |
| Course outcomes:   |   |            |                |
| At the end of the course the student will be able to:  |   |            |                |
| <ul style="list-style-type: none"><li>Formulate network matrices and models for solving load flow problems.</li><li>Perform steady state power flow analysis of power systems using numerical iterative techniques.</li><li>Suggest a method to control voltage profile.</li><li>Show knowledge of optimal operation of generators on a bus bar, optimal unit commitment,</li></ul>  |   |            |                |

| CARBON CAPTURE AND STORAGE(Professional Elective)  |  |            |                       |
| Subject Code   | 15EE743  | IA Marks   | 20                    |
| Number of Lecture Hours/Week   | 03   | Exam Hours | 03                    |
| Total Number of Lecture Hours  | 40   | Exam Marks | 80                    |
| Credits - 03   |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To provide an overview of carbon capture and carbon storage and explain the fundamentals of power generation.</li><li>To explain carbon capture from power generation, industrial processes, using solvent absorption and other technologies including membranes, adsorbents, chemical looping, cryogenics and gas hydrate technology.</li><li>To explain different geological storage methods including storage in coal seams, depleted gas reservoirs and saline formations.</li><li>To explain Carbon dioxide compression and pipeline transport. ■</li></ul> |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Introduction:</b> The Carbon Cycle, Mitigating Growth of The Atmospheric Carbon Inventory, The Process of Technology Innovation.<br><b>Overview of carbon capture and storage:</b> Carbon Capture, Carbon Storage.<br><b>Power generation fundamentals:</b> Physical and Chemical Fundamentals, Fossil-Fueled Power Plant, Combined Cycle Power Generation, Future Developments in Power-Generation Technology. ■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Carbon capture from power generation:</b> Introduction, Pre-combustion Capture, Post-combustion Capture, Oxy- fuel Combustion Capture, Chemical Looping Capture Systems, Capture-Ready and Retrofit Power Plant, Approaches to Zero-Emission Power Generation.<br><b>Carbon capture from industrial processes:</b> Cement Production, Steel Production, Oil Refining, Natural Gas Processing.<br><b>Absorption capture systems:</b> Chemical and Physical Fundamentals, Absorption Applications in Post Combustion Capture, Absorption Technology RD&D Status. ■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Adsorption capture systems:</b> Physical and Chemical Fundamentals, Adsorption Process Applications, Adsorption Technology RD&D Status. References and Resources.<br><b>Membrane separation systems:</b> Physical and Chemical Fundamentals, Membrane Configuration and Preparation and Module Construction, Membrane Technology RD&D Status, Membrane Applications in Pre-combustion Capture, Membrane and Molecular Sieve Applications in Oxy-fuel Combustion, Membrane Applications in Post-combustion CO <sub>2</sub> Separation, Membrane Applications in Natural Gas Processing. ■                                      |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Cryogenic and distillation systems:</b> Physical Fundamentals, Distillation column configuration and operation, Cryogenic oxygen production for oxy-fuel combustion, Ryan–Holmes process for CO <sub>2</sub> – CH <sub>4</sub> separation, RD&D in cryogenic and distillation technologies.<br><b>Mineral carbonation:</b> Physical and chemical fundamentals, Current state of technology development, Demonstration and deployment outlook.<br><b>Geological storage:</b> Introduction, Geological and engineering fundamentals, Enhanced oil recovery, Saline aquifer storage, Other geological storage options. ■         |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding.  |            |                       |

| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To explain construction, classification of industrial furnaces and the methods of heat transfer in them</li><li>To discuss heating capacity of batch furnaces</li><li>To discuss heating capacity of continuous furnaces</li><li>To discuss methods of saving energy in industrial furnace systems and fuel consumption calculation.</li><li>To explain operation and control of industrial furnaces.■</li></ul>   |  |            |                       |
| <b>Module-1</b>  |  |            | <b>Teaching Hours</b> |
| <b>Industrial Heating Processes:</b> Industrial Process Heating Furnaces, Classifications of Furnaces, Elements of Furnace Construction.<br><b>Heat Transfer in Industrial Furnaces:</b> Heat Required for Load and Furnace, Flow of Heat Within the Charged Load, Heat Transfer to the Charged Load Surface, Determining Furnace Gas Exit Temperature, Thermal Interaction in Furnaces, Temperature Uniformity, Turndown.■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>  |  |            |                       |
| <b>Heating Capacity of Batch Furnaces:</b> Definition of Heating Capacity, Effect of Rate of Heat Liberation, Effect of Rate of Heat Absorption by the Load, Effect of Load Arrangement, Effect of Load Thickness, Vertical Heating, Batch Indirect-Fired Furnaces, Batch Furnace Heating Capacity Practice, Controlled Cooling in or After Batch Furnaces.■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>  |  |            |                       |
| <b>Heating Capacity of Continuous Furnaces:</b> Continuous Furnaces Compared to Batch Furnaces, Continuous Dryers, Ovens, and Furnaces for <1400 F (<760 C), Continuous Midrange Furnaces, 1200 to 1800 F (650 to 980 C), Sintering and Pelletizing Furnaces, Axial Continuous Furnaces for Above 2000 F (1260 C), Continuous Furnaces for 1900 to 2500 F (1038 to 1370 C), Continuous Liquid Heating Furnaces.■   |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-4</b>  |  |            |                       |
| <b>Saving Energy in Industrial Furnace Systems:</b> Furnace Efficiency, Methods for Saving Heat, Heat Distribution in a Furnace, Furnace, Kiln, and Oven Heat Losses, Heat Saving in Direct-Fired Low-Temperature Ovens, Saving Fuel in Batch Furnaces, Saving Fuel in Continuous Furnaces, Effect of Load Thickness on Fuel Economy, Saving Fuel in Reheat Furnaces, Fuel Consumption Calculation, Fuel Consumption Data for Various Furnace Types, Energy Conservation by Heat Recovery from Flue Gases, Energy Costs of Pollution Control.■ |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-5</b>  |  |            | <b>08</b>             |
| <b>Operation and Control of Industrial Furnaces:</b> Burner and Flame Types, Location, Flame Fitting, Unwanted NOx Formation, Controls and Sensors- Care, Location, Zones, Air/Fuel Ratio Control, Furnace Pressure Control Turndown Ratio, Furnace Control Data Needs, Soaking Pit Heating Control, Uniformity Control in Forge Furnaces, Continuous Reheat Furnace Control. ■  |  |            |                       |
| <b>Revised Bloom's Taxonomy Level</b>  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |

| Credits - 03  |  |            |                       |
| <b>Course objectives:</b> <ul style="list-style-type: none"><li>To discuss basics of solar resource data, its acquisition and usage.</li><li>To discuss PV technology, buying the PV modules and connecting the modules to form arrays.</li><li>To discuss inverters, system components, cabling used to connect the components and mounting methods of the PV system.</li><li>To explain site assessment, design process of the grid connected system and its sizing.</li><li>To explain installation, commissioning, operation and maintenance of PV systems.</li><li>To explain the types of financial incentives available, calculation of payback time. ■</li></ul>  |  |            |                       |
| <b>Module-1</b>   |  |            | <b>Teaching Hours</b> |
| <b>Solar Resource and Radiation:</b> Solar resources, Quantifying solar radiation, The effect of the Earth's atmosphere on solar radiation, Sun geometry, Geometry for installing solar arrays.<br><b>PV Industry and Technology:</b> Semiconductor devices,Mainstream technologies,Monocrystalline silicon,Multicrystalline/polycrystalline silicon,Thin film solar cells,Contacts,Buying solar modules,Standards,Certifications,Warranties,Emerging technologies,Dye-sensitized solar cells,Sliver cells,Heterojunction with intrinsic thin layer (HIT) photovoltaic cells,III-V Semiconductors,Solar concentrators.<br><b>PV Cells, Modules and Arrays:</b> Characteristics of PV cells,Graphic representations of PV cell performance,Connecting PV cells to create a module,Specification sheets,Creating a string of modules,Creating an array,Photovoltaic array performance,Irradiance,Temperature,Shading.■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying.                             |            |                       |
| <b>Module-2</b>   |  |            |                       |
| <b>Inverters and Other System Components:</b> Introduction, Inverters,Battery inverters,Grid-interactive inverters,Transformers,Mainstream inverter technologies,String inverters,Multi-string inverter,Central inverter,Modular inverters,Inverter protection systems,Self-protection,Grid protection,Balance of system equipment: System equipment excluding the PV array and inverter,Cabling,PV combiner box,Module junction box,Circuit breakers and fuses,PV main disconnects/isolators,Lightning and surge protection,System monitoring,Metering,Net metering,Gross metering.<br>Mounting Systems:Roof mounting systems,Pitched roof mounts,Pitched roof mounts for tiled roofs,Pitched roof mounts for metal roofs,Rack mounts,Direct mounts,Building-integrated systems,Ground mounting systems,Ground rack mounts,Pole mounts,Sun-tracking systems,Wind loading,Lightning protection.■  |  |            | <b>08</b>             |
| <b>Revised Bloom's Taxonomy Level</b>   | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding, L <sub>3</sub> – Applying, L <sub>4</sub> – Analysing. |            |                       |
| <b>Module-3</b>   |  |            |                       |
| <b>Site Assessment:</b> Location of the PV array,Roof specifications,Is the site shade-free?,Solar Pathfinder,SolmetricSuneye,HORICatcher,iPhone apps,Software packages,Available area,Portrait installation,Landscape installation,Energy efficiency initiatives,Health, safety and environment (HSE) risks,Local environment,Locating balance of system equipment,Site plan.<br><b>Designing Grid-connected PV Systems:</b> Design brief,Existing system evaluation,Choosing system components,Modules,Mounting structure,Inverters,Cabling,Voltage sizing,Current sizing,Monitoring,System protection,Over-current protection,Fault-current protection,Lightning and surge protection,Grounding/earthing,Mechanical protection,Array protection,Sub-array protection,Extra low voltage (ELV) segmentation.<br><b>Sizing a PV System:</b> Introduction, Matching voltage specifications,Calculating maximum voltage,Calculating minimum voltage,Calculating the minimum number of modules in a string,Calculating the maximum voltage,Calculating the maximum number of modules in a string,Calculating the |  |            | <b>08</b>             |

| Module-3 (continued)  |   | Teaching Hours |
| minimum voltage, Calculating the minimum number of modules in a string, Matching current specifications, Matching modules to the inverter's power rating, Losses in utility-interactive PV systems, Temperature of the PV module, Dirt and soiling, Manufacturer's tolerance, Shading, Orientation and module tilt angle, Voltage drop, Inverter efficiency, Calculating system yield. ■  |   |                |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |                |
| Module-4  |   |                |
| <b>Installing Grid-connected PV Systems:</b> PV array installation, DC wiring, Cabling routes and required lengths, Cable sizing, PV combiner box, System grounding/earthing, Inverter installation, Installation checklist, Interconnection with the utility grid, Required information for installation, Safety.<br><b>System Commissioning:</b> Introduction, Final inspection of system installation, Testing, Commissioning, System documentation.<br><b>System Operation and Maintenance:</b> System maintenance, PV array maintenance, Inverter maintenance, System integrity, Troubleshooting, Identifying the problem, Troubleshooting PV arrays, Troubleshooting underperforming systems, Troubleshooting inverters, Other common problems. ■         |   | 08             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |                |
| Module-5  |   |                |
| <b>Marketing and Economics of Grid-connected PV Systems:</b> Introduction, PV system costing, Valuing a PV system, Simple payback and financial incentives, Simple payback, Feed-in tariffs, Rebates, Tax incentives, Loans, Renewable portfolio standards and renewable energy certificates, Marketing, Insurance.<br><b>Case Studies:</b> Case studies A to G. ■  |   | 08             |
| Revised Bloom's Taxonomy Level  | L <sub>1</sub> – Remembering, L <sub>2</sub> – Understanding. |                |
| <b>Course outcomes:</b><br>At the end of the course the student will be able to: <ul style="list-style-type: none"><li>• Discuss basics of solar resource data, its acquisition and usage.</li><li>• Explain PV technology, buying the PV modules and connecting the modules to form arrays.</li><li>• Explain the use of inverters, other system components, cabling used to connect the components and mounting methods of the PV system.</li><li>• Assess the site for PV system installation.</li><li>• Design a grid connected system and compute its size.</li><li>• Explain installation, commissioning, operation and maintenance of PV systems.</li><li>• Explain the types of financial incentives available, calculation of payback time ■</li></ul> |   |                |
| <b>Graduate Attributes (As per NBA)</b><br>Engineering Knowledge, Problem Analysis, Design/ Development of Solutions, Conduct investigations of complex problems, Modern Tool Usage, The Engineer and Society, Environment and Sustainability, Ethics, Individual and Team Work, Communication, Project Management and Finance, Life-long Learning.   |   |                |
| <b>Question paper pattern:</b> <ul style="list-style-type: none"><li>• The question paper will have ten questions.</li><li>• Each full question is for 16 marks.</li><li>• There will be 2 full questions (with a maximum of four sub questions in one full question) from each module.</li><li>• Each full question with sub questions will cover the contents under a module.</li><li>• Students will have to answer 5 full questions, selecting one full question from each module. ■</li></ul>  |   |                |

## Elective-IV (Group-D)

10EE831 - Reactive Power Management  
 10EE832 - Flexible A.C. Transmission Systems (FACTS)  
 10EE833- Advanced Instrumentation System  
 10EE834 - AI Applications to Power Systems  
 10EE835 - Data Base Management Systems (DBMS)  
 10EE836 - Renewable Energy Sources

## Elective-V (Group-E)

10EE841 - Power Systems Dynamics and Stability  
 10EE842 - Energy Auditing & Demand Side Management  
 10EE843 - Data communications and Networking  
 10EE844 - Electrical Distribution Systems  
 10EE845 - Insulation Engineering  
 10EE846 - Intellectual Property Rights  
 10EE847 - Electrical Power Quality
