PO12	1	0.934			

Justification:

1. Justification for Mapping of POs & PSOs

Mapped POs/ PSOs	Weightage	Justification
PO1	3	This activity substantially enlightens energy efficiency, power generation, energy services, facility management, environmental compliance, sustainable energy, and renewable energy.
PO6	2	This activity addresses briefly engineers have a diverse role in society regarding economical development. They can play an important role in infrastructure development, agricultural productivity, environmental sustainability, cooperation with academia, social and ethical roles, and mitigating the energy crisis.
PO7	3	This activity addresses briefly environmental problems directly related to energy production and consumption including air pollution, climate change, water pollution, thermal pollution, and solid waste disposal.
PO8	1	This activity addresses ethical background, which shapes our intimate relations with this universe and its things, is not adequately considered. The moral grounds of energy decisions work, and energy decision-making processes give rise to ethical problems.
PO9	1	This activity addresses a carefully selected team that joins well-informed individuals into a group setting to complete an important task regarding energy and its economics. The individuals are selected for their product knowledge, as well as their skills, reasoning, and leadership abilities.
PO10	1	This activity enlightens creates awareness and provides information and education on the development of energy and its economics.
PO11	1	This activity provides exposure to energy and is one of the most important inputs for economic development. From a physical viewpoint, the use of energy drives economic productivity and industrial growth and is central to the operation of any modern economy.
PO12	1	This activity enlightens cost-effective energy efficiency improvements that can have positive macroeconomic impacts, boosting economic activity and often leading to increased employment.
PSO1	3	This activity provides exposure to many of the key skills that mechanical engineers learn and develop a wide range of applications for renewable energy engineering.
PSO2	1	This activity addresses knowledge of thermodynamics, fluid mechanics, and heat transfer, for example, is essential for solving the wind power challenge outlined above, but the same expertise is also critical in designing hydropower infrastructure, optimizing cooling systems, and developing new energy storage

		technology such as thermochemical batteries and solar fuel for long-duration energy storage
PSO3	2	This activity enlightens about mechanical engineers have played a key role in enabling the world's transition to clean energy and more sustainable practices.

- The activity mapped with PO1, PO6, PO7, PO8, PO9, PO10, PO11 & PO12 was found satisfactory with attainment levels of 2.802, 1.868, 2.802, 0.934, 0.934, 0.934 and 0.934 against the Mapped values during the impact analysis.
- The activity mapped with PSO1, PSO2 & PSO3 was found satisfactory with attainment levels of 2.802, 0.934 & 1.868 against the Mapped value during the impact analysis.

Conclusion: The activity organized to fulfill the program outcomes engineering knowledge, engineer and society, environment and sustainability, ethics, individual & teamwork, communication, project management & finance, and lifelong learning and PSO1, PSO2 & PSO3 has mitigated the gap identified satisfactorily to some extent.

Future Suggestions: Such activity can be extended to multiple events for our students to create interest in renewable energy sources to avoid the current energy crisis in India.
